

Scalable HD Map Creation from Crowdsourced Vision

Raphael Mamane
IMVC 2024

#1

AI Dash Cam Brand
in the US

500K

Active Users

The Nexar network of eyes
on the road

94%
of US roads
at least once per month

40M
detections
per day

3B+
miles
of video per year

The Future of Autonomous Driving Relies on *HD Maps*

Sub-Meter Accurate | Road Geometries & Assets

The Current Process of HD Map Creation is *Not Scalable*

Expensive Fleets | Manual Annotation | Frequent Updates

Can We Create High Definition Maps from Consumer Dashcams?

Monocular

Uncalibrated

No Depth
Sensor

Consumer-
quality
resolution

Standard-Grade
GPS

Not 360°

Smart Frame Selection

Edge Detection

Deep Learning Models running
on dashcams

Efficient Image Selection

Maximum Information | Good
Lighting

Anonymization

Faces | License Plates |
Dashboard

Structure from Motion

Feature Matching

ALIKED | LightGlue

Retrieving Poses

COLMAP

Bundle Adjustment

An aerial view of a road and surrounding terrain, rendered as a dense point cloud. The points are colored in shades of blue and purple, representing different elevations or data points. The road is clearly visible as a central feature, with surrounding areas showing more complex point distributions.

At the end of the process we generate
a dense highly-localized point cloud

Infusing the 3D Point Cloud with Semantics

Traffic Sign Detection

Fine-Tuned Object Detector

Road Surface Semantic Segmentation

Mask2Former

Getting a Birds-Eye-View for Each Image

Fit plane to road point cloud

RANSAC

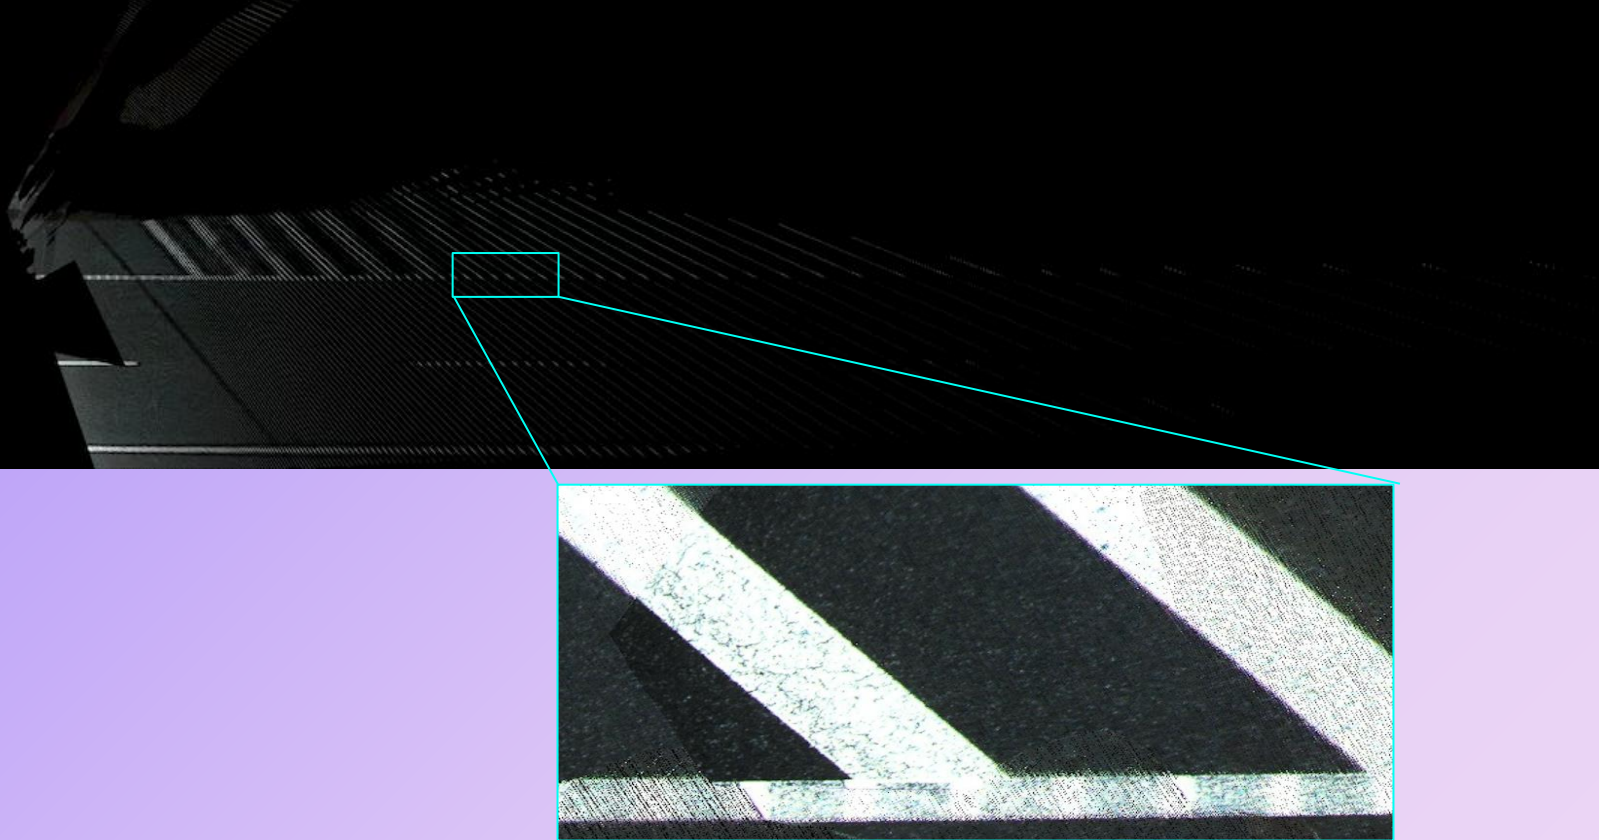

Transform road pixels to Birds Eye View

Homography onto plane

Stitching into a Combined Birds-Eye-View

Infer Lane Lines and Road Markings

Obtain final road surface assets using *lane detection* and *instance segmentation*

Scaling our Solution for Whole Regions

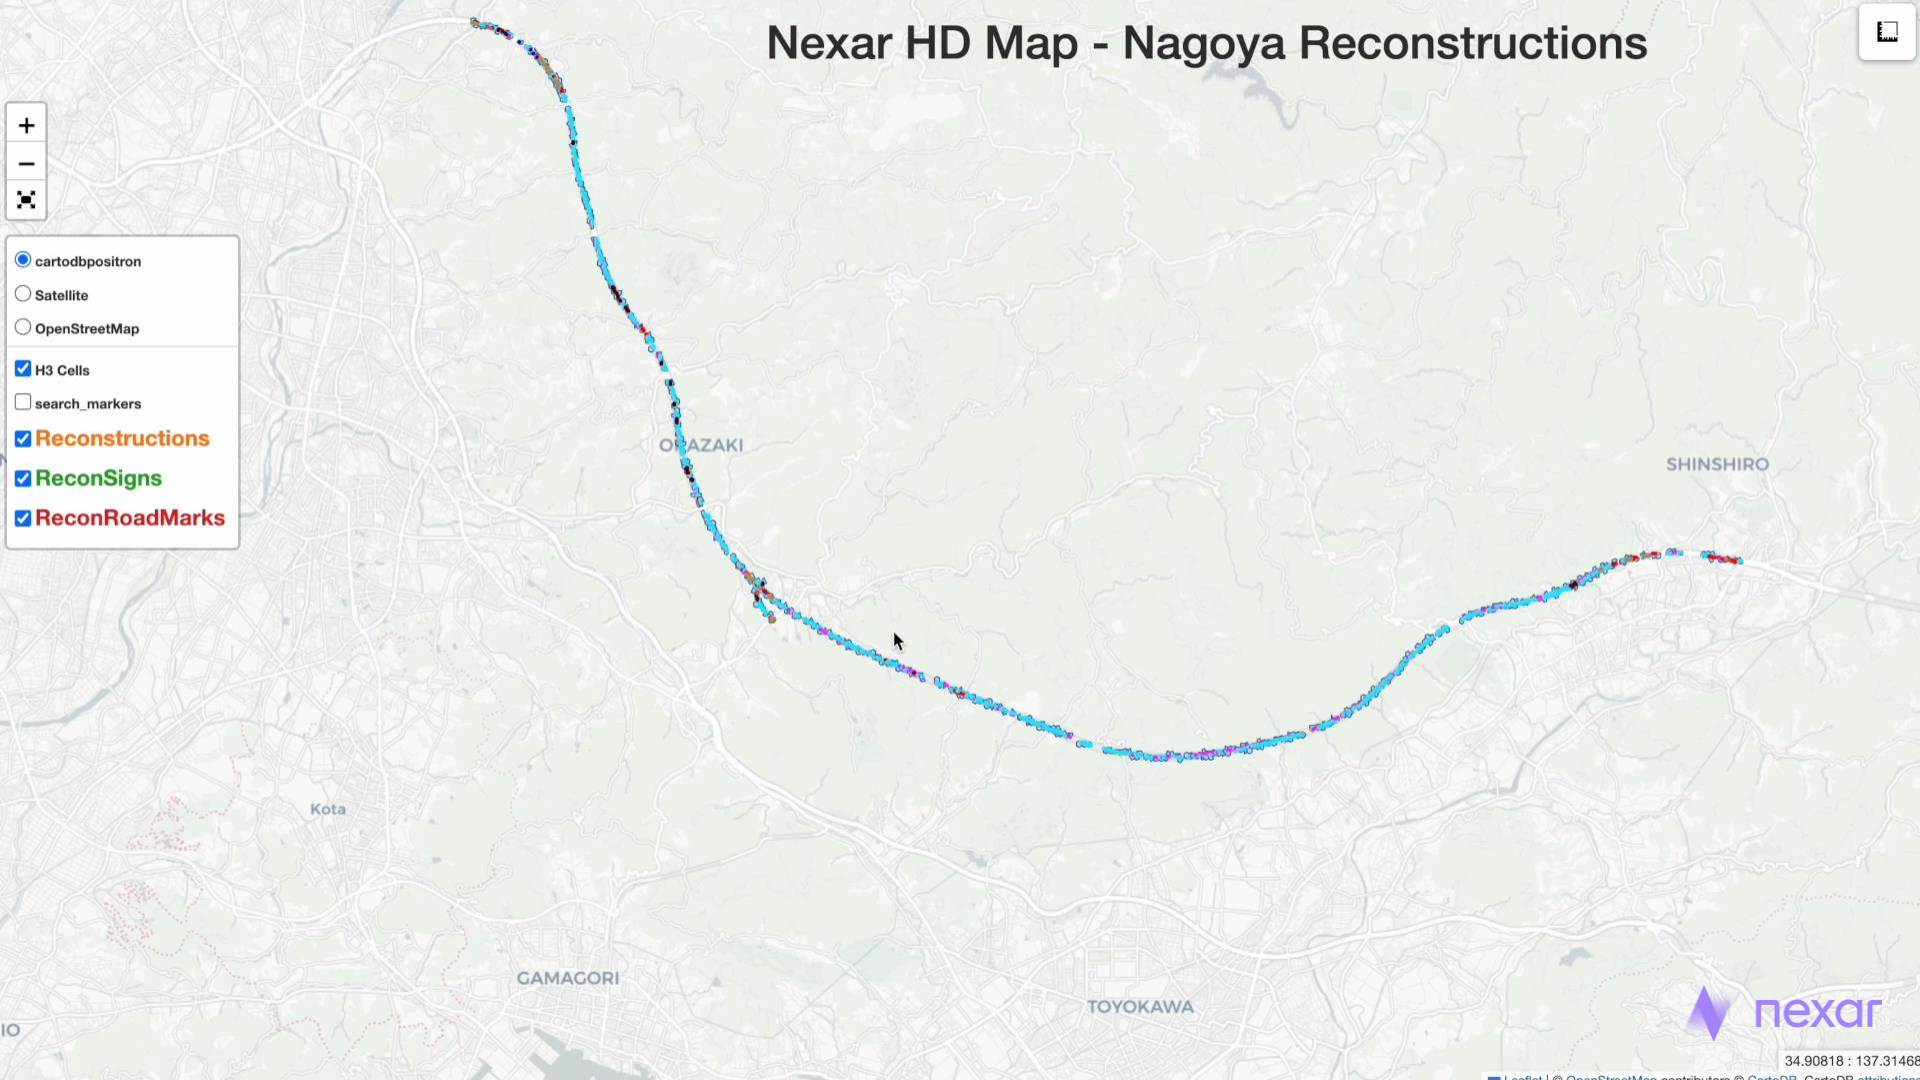

Crowdsourced vision *is* the way forward to making *scalable* and *cost-effective* HD maps

Privacy by Design

Nexar maintains users' privacy in accordance with all laws and regulations utilizing AI to remove all potential Personal Identifiable information (PII) at the source

- Automatic blurring of license plates, faces around the car
- Automatic cropping of image to avoid PII exposure on driver dashboard
- Doesn't share routes, personal footage
- GDPR and CCPA compliant

Cost-Effective Data Offloading Through WiFi

Powered by Nexar Edge SDK

Secure and Automatic Connection to Wifi
using millions of hotspots
